Continued Examination Under 37 CFR 1.114

3. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under Ex Parte Quayle, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 6/18/10 has been entered.

Allowable Subject Matter

4. Claims 53-87 are allowed.
5. The following is an examiner's statement of reasons for allowance: Regarding claim 53, the prior art of record does not disclose a multiaxis machine tool for producing workpieces having a helicoidal generated surface, wherein a grinding wheel is provided as the tool and, as mechanical axes, at least one positionable radial infeed axis (χ) is provided for the grinding wheel, a grinding slide (ζ) which can be positioned horizontally and orthogonally in relation to the radial infeed axis is provided for the positioning of the grinding wheel in the direction of displacement of the grinding slide, a positionable rotating axis (β) of a clamping head is provided

for the rotation of the workpiece in the workpiece holder, a positionable pivoting axis (τ) is provided for the pivoting of the workpiece and the grinding wheel with respect to each other by means of a rotation of the grinding wheel axis or its parallel projection in a vertical plane (B), and a rotating axis (ω) is provided for the driving of the grinding wheel.

Regarding claim 77, the prior art of record does not disclose a multitaxis machine tool for producing workpieces having a helicoidal generated surface, wherein one of the at least one predefined type of function or relation is a polynomial function with polynomial coefficients as parameters, and wherein the polynomial function is of the sixth degree.

Regarding claim 78, the prior art of record does not disclose a multitaxis machine tool for producing workpieces having a helicoidal generated surface, wherein in the memory in which machine control parameters accessed by the control device are stored there is a data structure which is intended for receiving a definition of at least one predefined type of relation for the activation of the respective mechanical axis by the control device, wherein one of the at least one predefined type of relation is a circular relation with a circle radius and a centre point, given by a pair of coordinates, and a rotating direction as parameters.

Regarding claim 79, the prior art of record does not disclose a multitaxis machine tool for producing workpieces having a helicoidal generated surface, wherein in the memory in which machine control parameters accessed by the control device are stored there is a data structure which is intended for receiving a definition of at least one predefined type of function for the activation of the respective mechanical axis by the control device, wherein one of the at least one predefined type of function is a table of coordinates with coordinates as parameters.

Regarding claim 83, the prior art of record does not disclose a multitaxis machine tool for producing workpieces having a helicoidal generated surface, wherein in the memory in which machine control parameters accessed by the control device are stored there is a data structure which is intended for receiving a definition of a function or relation for the activation of the respective mechanical axis by the control device, and there is a data structure which combines at least one group of machine control parameters corresponding to a partial region of the workpiece, as a segment under a common segment identification, wherein the common segment identification is a segment number. The virtual axis of claims 53, 77-79 and 83 does not serve for any actual activation of mechanical axes, in particular not for any software synthesis of additional axes finding an equivalent in the mechanical reality of the machine tool to be activated, but only for the synchronization of the activation of other axes (Applicant's specification pg. 7, ¶17). The allowability, at least in part, resides in these facts.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
